

## Staff Profile

### Keith Sparrow Operations Manager

Keith started at Walkers in 1970 after working for a plumber for 18 months straight out of school. His role has always been in the sales area and has evolved into purchasing and yard staff management, supervision and training.

Keith's responsibilities are ensuring we have sufficient stocks of all our timber and building supplies to meet our customers needs and ensuring our staff are happy and safe and that our customers expectations are met or exceeded to uphold Walker Bros reputation as one of the best timber, building & Hardware suppliers in Australia.

Keith has a rather active life outside of Walker Bros. Keith follows all codes of sports particularly Rugby League and Baseball. Every Saturday in the summer you will find him sailing a laser dinghy competitively at Gosford Sailing Club.

Keith is always keen interested on your feedback and can be contacted on 02 43247355 or emailed [keith@walkerbros.com.au](mailto:keith@walkerbros.com.au)

Your feedback on our service would be appreciated. Please send via email to [jason@walkerbros.com.au](mailto:jason@walkerbros.com.au)

ABN 20 000 703 211

## WALKER BROS IS THE ONLY STOCKIST OF THE EZI-PIER SYSTEM ON THE CENTRAL COAST

The adjustable Ezi-Pier pier makes it quick and easy to achieve the right height for your floor – it's the affordable site solution!

- Available in 75mm & 89mm
- Galvanized finish
- Ideal for steel or timber floors
- High capacity – Fully engineered
- Pier includes all screws, tru-bolts & nylon packers

Walker Bros also stocks the Ezi-Brace system for bracing the Ezi-Piers which provides High Lateral Bracing Capacity with fast installation

### **BENEFITS OF EZIPIER**

**True adjustability:** Adjusting an Ezipier head is done by turning a nut not by removing bolts or tek screws.

**Safe perimeter:** Because Ezipier heads are designed for a flush finish there are no protruding components to hurt you when walking by.

**Clear termite inspection point:** Solid threaded rod – simple and easy to inspect, doesn't interfere with cladding (note ant caps which can interfere with cladding are still only inspection points not "barriers").

**Base plate protector:** The first pier system to provide a high capacity (5mm thick) composite protector to separate the base plate from the concrete footing for added protection against ponding of water.

**Affordable flexibility & convenience:** The range of Ezipier heads have been designed to suit standard post sizes to handle most residential loads of up to 5m heights and for ease of purchase from local merchants.

**Protection:** Now you have the option to choose posts with higher protection when required to suit site conditions such as coastal areas.

**Non-combustible:** Can be used in bushfire prone areas.
